FREE · BETA 0.15 · FOR WOW: FOREVER · RETAIL SUPPORTED TOO

Know what it's worth before you list it.

A Windows desktop companion app that reads the auction house for you. See prices at every auction house, follow trends, get alerted when an item crosses your number, find out which gear upgrade is actually worth the gold, look up what every monster and dungeon drops, and get a route through the quests open to your character.

Download free on GitHub

Read the fine print first

12 profession guides, 1–300 ~15 auction houses compared

4,000+ monsters in the compendium 33 dungeons and raids

Hourly price checks Your own Blizzard key

WHY USE IT

Stop guessing at the auction house.

Every listing you post on a hunch, every material you buy at the wrong time, every gear piece you replace without checking costs gold. This app puts the numbers in front of you.

SELL SMARTER

Price it right

Compare every auction house side by side, see the payout after the 5% cut, and learn which weekdays and 3-hour windows your item's price tends to run highest.

LEVEL CHEAPER

1-300 for less

Leveling guides for all 12 professions price every step live and mark the cheapest option in each skill bracket. Your progress is saved.

FARM WITH A PLAN

Know the drops

Pick a zone, see every monster in it, what each one drops at today's auction prices, and which quests need it. Track the ones you're farming.

EVERYTHING INSIDE

Ten tools in one window.

Each one does one job. Together they cover buying, selling, crafting, leveling, gearing, farming and questing.

SEARCH

Find anything on the auction house

- Browse the same category list the game uses, loaded straight from Blizzard
- Type all or part of a name: the exact item comes first, then names with every word you typed
- Filter by quality, required level, price range, or items currently for sale
- Sort results and see the price at each auction house on every card
- Add items to your Watchlist in one click, or open them on Wowhead

WATCHLIST

Track the items you care about

- Items grouped by category, with Day, Week and Month trends after one Check all
- Price history chart for every item
- Sell helper shows your payout after the auction house cut
- Best time to sell, worked out from your own recorded history (hours after about 2 days of data, weekdays after about a week)
- Price alerts above or below a number you choose
- Alerts and history refresh every hour while the app is open

CHARACTER

Find your next upgrade

- Look up a character and see level, class, race and every gear slot, empty ones included
- Click a slot for its stats, double-click to scan only that slot, or scan them all
- Upgrades are limited to what your class can wear and wield
- Each result shows an Upgrade % over your equipped item
- A "Why these results?" breakdown shows how many items were known, for sale, usable, missing data, or better
- Upgrades from dungeons scores dungeon and raid drops the same way and names the monster that drops each

PROFESSIONS HUB

See what crafting really costs

- Every recipe Blizzard publishes for each crafting profession, priced at current auction prices
- Gathering professions show material prices
- Log a gathering session with the spot or route and the time it took to get gold per hour

LEVELING GUIDES

Skill 1-300, all 12 professions

- Options for each skill bracket, priced live, with the best value marked
- Trainer notes and a Wowhead link at each step
- Your place in the guide is saved
- Guides are plain files, so you can customize them

TOOLS MENU

The extras that pay for themselves

- Flip finder lists items listed below what they typically resell for, after the auction house cut
- Custom crafting recipes with profit worked out for you
- Fishing spot planner and session value
- Guild crafters shows who in your guild can make a recipe
- CSV export of your price history and sessions, for spreadsheets
- Pixel-art look with quality-colored item names and coin icons

MONSTER COMPENDIUM

Every monster, what it drops, and why you'd hunt it

- Monsters listed by region: Eastern Kingdoms, Kalimdor, the new Forever areas, dungeons and raids
- Every quest that needs the monster or its drops, with level, faction, quest giver and objective
- Track the monsters you're farming, with a kill counter and notes
- See where each monster spawns, and copy a waypoint for the TomTom addon
- Each monster's drops, priced at the lowest current auction listing, plus the most valuable one
- Monster names link to Wowhead or Warcraft Wiki, whichever you prefer
- Search by monster name, or by an item to see who drops it
- With a character loaded, a For you column marks the drops that are upgrades

DUNGEONS NEW

Know the dungeon before you go

- Every WoW: Forever dungeon and raid in the monster data, sorted by level
- Where the entrance is, with a route there for Alliance and for Horde
- Every monster inside and everything they drop, priced on the auction house
- The quests that send you in, with who gives them
- Travel notes are a plain file you can correct yourself

PROGRESS NEW

See where your character stands

- Quests done per zone, counted only for your faction and class
- Quest log, milestones, reputations, PvP, dungeons, raids and professions
- What to do next, built from the quests open to you right now
- My characters lists everyone you've loaded side by side

TONIGHT'S ROUTE NEW

Your open quests, in order

- Turns your open quests into numbered stops: pick up, do, turn in
- Each stop has map coordinates and a waypoint to copy
- Nearest stop first, never an objective before its pick-up
- Steps with no known location are listed, not hidden

NO BLACK BOX

See how the upgrade score works.

Some tools give you a number and ask you to trust it. This one shows its math. The efficiency score multiplies how many stat points an item is worth by how well those stats suit your class.

Items with no stats published by Blizzard get a fit of 50%, shown with a ~ so you know it is an estimate. You can also switch to comparing stats only, or item level only.

Efficiency = Power X Fit

Power estimates stat points from item level, quality and slot, using the Classic item-budget formula. **Fit** is the share of the item's main stats your class values. Weapon DPS and armor are added on top.

Quality	Base budget
Uncommon	(ilvl - 8) / 2
Rare	(ilvl - 0.75) / 1.8
Epic	(ilvl - 26) / 1.2

Then multiplied by a slot modifier: 1.0, 0.75, 0.5625, 0.4219 or 0.3164.

PRIVATE BY DESIGN

Your key. Your data. Your PC.

There is no account to make, no shared login and no server collecting your lists. You create your own free Blizzard API key, and the app keeps everything beside itself on your computer.

Stays on your computer

Your Blizzard API ID and secret

Watchlist and alerts

Price history database

Characters you looked up, and their saved progress

Guide progress and fishing sessions

Tracked monsters, kill counts and notes

Your guild's crafter list, refreshed once a day

Goes over the internet

Login and data requests to Blizzard's servers, using your own key

GitHub, once, to download the free QuestieDB monster data when you first open the Monster Compendium, Dungeons or Progress (and when you click Update data)

Wowhead or Warcraft Wiki, only when you click a link, and only in your browser

The app never asks for your Battle.net password. Every other request stays on your machine.

GET STARTED

Ready in about five minutes.

1

Download it and give it its own folder

Get the latest zip from the official Releases page, github.com/kadestclair-dotcom/awesome-house/releases, and unzip it into a folder such as Desktop\Awesome House. The app saves its files beside itself, so a dedicated folder keeps them together.

2

Open it

Windows may say "Windows protected your PC." Click More info, then Run anyway. The first launch takes a few seconds while it unpacks.

3

Make your free Blizzard API key

A setup window opens with a button that takes you to develop.battle.net. Create a client there, then paste the Client ID and Secret into the window. You only do this once. The next section walks through every field on Blizzard's form.

4

Search, add, and let it watch

Search for an item, add it to your Watchlist, and set an alert. Leave the app open and it checks again every hour, building your price history as it goes.

KEY SETUP

Blizzard's form, field by field.

Your key is a free "API client" on Blizzard's developer site. The form is written for website developers, so it asks about redirect and service URLs. This app doesn't use either of them. It only needs the Client ID and Client Secret you get at the end.

1. Click the button in the app's setup window, or go to **develop.battle.net/access/clients**, and sign in with your normal Battle.net account.
2. Choose **Create Client** and fill in the form as shown below.
3. Save, then open your new client to see its Client ID and Client Secret.
4. Copy both into the app's setup window and click save. You're done.

Client Name

`Awesome House`

Any name you like. Only you see it.

Redirect URLs

`(leave empty)`

What it is: where a website sends people back after a "Log in with Battle.net" button.

Why you can skip it: this app never logs anyone in. It only reads public auction and character data, so this address is never used.

`If the form won't save without one, enter http://localhost`

Service URL

`(leave empty)`

What it is: the website of the project using the key.

Why you can skip it: you're running a desktop app, not a website. If you see a checkbox that says "I do not have a service URL for this client", tick it.

Intended Use

`Personal desktop app to check World of Warcraft auction house prices.`

A short, honest sentence about what you'll use the key for. Copying this one is fine.

Client ID and Client Secret

`(shown after you save)`

These are the only two things the app needs. Paste them into the setup window. Treat the Client Secret like a password, and don't post it or send it to anyone.

If saving the form gives an error

Blizzard's form sometimes fails with a generic error that has nothing to do with what you typed. Wait a few minutes and try again. Leaving both URL fields empty is the setup most players report working.

STRAIGHT TALK

What to know before you run it.

Every tool has limits, and this one is still in beta. Here are its limits, plainly, with what to do about each.

TOPIC	WHAT IT MEANS	WHAT TO DO
Beta software EXPECT BUGS	Awesome House is at Beta 0.15. Features are still being added and some things will break or change between versions.	Use Support > Report a bug when something looks wrong. Screenshots help.
Windows warning EXPECT IT	The app is not code-signed, so Windows SmartScreen shows "Windows protected your PC." Some antivirus programs also wrongly flag apps packaged with PyInstaller.	Click More info, then Run anyway. Only download from the official GitHub Releases page, where every release is built by GitHub from the public code. If your antivirus flags it, don't turn the antivirus off: check the zip against SHA256SUMS.txt on the release, or run the app from its source code instead (see Quick answers).
Your API secret is stored as plain text PROTECT IT	Your Client Secret is saved in `wow_price_config.json` next to the app. Anyone who gets that file could use your key.	Do not zip up and share the app folder after you have set it up. If it leaks, delete the client at develop.battle.net and make a new one.
Unofficial data source MAY CHANGE	Blizzard's WoW: Forever API was undocumented as of November 2026, so endpoints can change and break parts of the app.	Keep an eye out for updates if a tab stops loading.
Some items have no data LIMIT	Blizzard's item lookup is missing many Classic-era items in Forever. One developer found 652 of 1,515 auction item IDs missing.	Expect gaps in names, stats and upgrade results. The "Why these results?" panel shows when data is the reason.
Monster data is community-made LIMIT	The Monster Compendium uses QuestieDB, the Questie addon's community database. Its Forever data is still filling in, so some new monsters, drops and quests are missing. Drop chances are only known for quest items.	Click Update data now and then to get the latest release. Use the Wowhead link to double-check a drop before you farm for hours.
Dungeon routes are unchecked LIMIT	Travel routes on the Dungeons tab are written from Classic-era geography and have not been checked in Forever. Forever's new dungeons have no route yet. Entrance coordinates come from QuestieDB.	Treat a route as a starting point. Click Edit routes to correct one; your copy is kept next to the app.

TOPIC	WHAT IT MEANS	WHAT TO DO
Progress is as of your last logout LIMIT	Blizzard updates a character when it logs out, so the Progress tab can be a session behind. Quest suggestions and the route rely on QuestieDB's quest list, don't know about roads or flight paths, and can't tell which objectives you've finished.	Load the character again after you play. Use the route as a plan, and your quest log as the truth.
History starts when you do LIMIT	Price history is recorded only while the app is open, one point per hourly snapshot. Trends need time to fill in.	Leave it running in the background while you play, especially for items you care about.
Estimates, not promises LIMIT	The auction house cut is assumed to be 5%, the Classic rate, and is not confirmed for Forever. Upgrade scores use rough leveling weights and are not a full simulation.	Treat results as a strong starting point. Check the tooltip on anything big before you spend or sell.
Not real-time LIMIT	Blizzard refreshes auction data about once an hour. Prices you see can be up to an hour old.	Re-check in game before a large purchase.
New characters LIMIT	In Forever, characters only show up in lookups from level 10, after you log out. The same goes for guild members on the Guild crafters list.	If a lookup fails, log out and try again in a few minutes.

SUPPORT THE PROJECT

Free to use. Kept alive by players.

The app costs nothing. If it saves you gold, a donation helps keep it updated as Blizzard's API changes.

Donations are optional and never unlock anything. Everyone gets the same app.

Say thanks

Donate through PayPal. You can also find this link in the app under Help > Support the project, or with the Support button.

Found a bug? Choose Support > Report a bug in the app. It opens an email with a ready-made report, or you can write to `kadestclair@gmail.com` directly.

QUESTIONS

Quick answers.

▼ Does it touch my game account?

No. The app does not interact with the game client and never asks for your Battle.net password. It reads data through Blizzard's public developer API using a key you create yourself.

▼ Does the Blizzard API key cost anything?

No. Blizzard API keys are free to create at develop.battle.net, and the app needs nothing else running in the background.

▼ Does it work for retail WoW?

Yes. It is built for WoW: Forever and supports retail as well. For retail, character lookups use the character name and realm. The Monster Compendium, Dungeons and Progress tabs, Upgrades from dungeons and Guild crafters cover Forever only.

▼ Where does the monster data come from?

From QuestieDB, the free community database behind the Questie addon. It isn't packed into the app: the first time you open the Monster Compendium, Dungeons or Progress, the app asks before downloading it from GitHub (about 14 MB) and keeps it on your computer.

▼ Can I back up or move my data?

Everything lives in files beside the app, so copying the folder moves your watchlist, history and tracked monsters. Keep in mind that it also copies your API secret, so only move it between your own computers. You can export price history and fishing sessions to CSV from the app.

▼ Can I share it with friends?

Please send them the official download page, github.com/kadestclair-dotcom/awesome-house/releases, instead of passing your copy on. The license asks that copies only come from there, and once your copy is set up, its folder holds your private API secret.

▼ What if my antivirus blocks it?

Some antivirus programs flag apps packed with PyInstaller, the tool used to turn the app into a single .exe, even when they're clean. Don't turn your antivirus off for it. Instead, make sure the zip came from the official Releases page, compare it with SHA256SUMS.txt on that release, and if you like, upload it to virustotal.com for a second opinion. If you'd still rather not run the .exe, run the app from its source code instead (next question). SECURITY.md has the details.

▼ Can I run it without the .exe?

Yes. The app is plain Python and uses only Python's standard library, so there is nothing else to install. Install Python 3.12 or newer from python.org, download the source code from the repository (Code > Download ZIP), unzip it into a folder of its own and double-click **wow_price_gui.pyw**. It works the same as the .exe and keeps its files in that folder.
